The MAILING DATE of this communication app Period for Reply	ears on the cover sheet with the c	orrespondence add	lress				
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Art Unit: 3679

Specification

1. The abstract of the disclosure is objected to because it begins with a phrase that can be implied. Correction is required. See MPEP § 608.01(b).

Claim Objections

2. The claims are objected to as failing to comply with 37 CFR 1.75(i) because elements of the claims are not separated by line indentation.

Claim Rejections - 35 USC § 112

- 3. The following is a quotation of the second paragraph of 35 U.S.C. 112:
 - The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 4. Claims 1-12 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
 - a. Claims 1 & 2 recite the limitations "the inner spherical surface" and "the outer spherical surface". There is insufficient antecedent basis for these limitations in the claims.
 - b. Claim 1 recites the limitations, "the outer and inner rings" and "the torsional angle". There is insufficient antecedent basis for these limitations in the claim.
 - c. Claim 1 recites the limitation, "the torsional angle in a torque-torsional angle diagram is approximately 0 at the time of the input torque 0 Nm." The meaning of the limitation is unknown.

Art Unit: 3679

d. Claim 2 recites the limitation, "the torsional rigidity" and "the torsional angle diagram". There is insufficient antecedent basis for these limitations in the claim.

e. Claim 4 recites the limitation, "the expanded side". There is insufficient antecedent basis for this limitation in the claim.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yamazaki et al, US 2003/0083135 (Yamazaki). Fig. 5 shows a fixed type constant velocity joint comprising an outer joint member 1 formed with axially extending ball grooves 1a at circumferentially equispaced positions on the inner spherical surface 1b, an inner joint member 2 formed with axially extending ball grooves 2a at circumferentially equispaced positions on the outer spherical surface 2b, balls 3 disposed in wedge-shaped ball tracks defined by the ball grooves of the outer and inner joint members, and a cage 4 interposed between the inner spherical surface of the outer joint member and the outer spherical surface of the inner joint member to hold the balls. Fig. 5 shows that a pressing section 10 which axially applies an elastic pressing force 12 is provided on the inner joint member 2 side, and the cage 4 is provided with a receiving section 15 which

Art Unit: 3679

receives a pressing force from said pressing section. Yamazaki discloses in paragraph 0046 that the fixed type constant velocity joint is used for steering devices.

Yamazaki does not expressly disclose the torsional rigidity of the joint in the vicinity of an input torque equal to 0 Nm is put in a range of 1.5 Nm/deg to 6 Nm/deg. However, it would have been obvious to one having ordinary skill in the art at the time the invention was made to have the torsional rigidity of the joint in a range of 1.5 Nm/deg to 6 Nm/deg in the vicinity of input torque 0 Nm, since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum or workable ranges involves only routine skill in the art. *In re Kulling*, 897 F.2d 1147, 14 USPQ2d 1056.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Greg Binda whose telephone number is (571) 272-7077. The examiner can normally be reached on M-F 10:30 am to 8:00 pm with alternate Fridays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Daniel P. Stodola can be reached on (571) 272-7087. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
